
Where are the TOOsonix Systems designed and manufactured?

Frequently Asked Questions

The TOOsonix systems are all *Made in Denmark* and carries the “Country of Origin Denmark” on all relevant documentation.

The company, its founders, and its investors, are based in Denmark. The company is located in the DTU Science Park, a leading hub for medical and pharmaceutical technology companies, and directly linked to one of the world’s leading universities in science and technology.

The design of the TOOsonix systems is inspired by the Danish design principle of clean functionality and simplicity. Inside the unit, we have mimicked another of Denmark’s great success stories of modular systems from Lego.

The TOOsonix systems are designed from a completely modular principle, where individual modules can be assembled, maintained or replaced in very short time.

Down-time should therefore be minimal. Should the equipment break down, a quick service visit will get you up and running again in short time after simply replacing the problematic module.
